

# Natural Language Processing Engineer Resume

## Professional Summary

Aspiring NLP Engineer with strong foundations in Natural Language Processing, Large Language Models, Deep Learning, and Information Retrieval. Experienced in developing intelligent applications using Transformers, Hugging Face, FastAPI, and Retrieval-Augmented Generation (RAG).

## Research Interests

- Large Language Models
- Retrieval-Augmented Generation
- Information Retrieval
- Text Classification
- Named Entity Recognition
- Question Answering Systems

## Projects

### AI Resume Analyzer

- Built an intelligent resume analyzer using Python.
- Implemented rule-based skill extraction and education parsing.
- Integrated Gemini API for project extraction, resume review and learning roadmap generation.
- Implemented TF-IDF and Cosine Similarity for resume-job matching.

### Domain Specific RAG Chatbot

- Developed a Retrieval-Augmented Generation chatbot.
- Used LangChain and FAISS for semantic retrieval.
- Generated context-aware responses using Gemini.
- Implemented document chunking and embedding pipeline.

### News Classification System

- Fine-tuned Transformer models for multi-class text classification.
- Applied tokenization and preprocessing using Hugging Face.
- Achieved 94% validation accuracy.

## Technical Skills

|                             |                                                                |
|-----------------------------|----------------------------------------------------------------|
| Programming                 | Python, SQL, C++                                               |
| Deep Learning               | PyTorch, TensorFlow                                            |
| Natural Language Processing | spaCy, NLTK, Transformers, Hugging Face, Sentence Transformers |
| LLM                         | Gemini API, LangChain, Prompt Engineering, RAG                 |
| Vector Databases            | FAISS, ChromaDB                                                |
| Backend                     | FastAPI, REST API                                              |
| Databases                   | MongoDB, PostgreSQL                                            |
| Tools                       | Git, GitHub, Docker, Linux, Jupyter Notebook                   |

## Education

Bachelor of Technology  
Computer Science Engineering  
Expected Graduation: 2026  
CGPA: 9.05

## Publications

- Comparative Analysis of Transformer Architectures for Text Classification (Student Research Paper)
- Semantic Search using Dense Vector Embeddings (Technical Report)

## Certifications

- Natural Language Processing Specialization
- Generative AI with Large Language Models
- Deep Learning Specialization

## Achievements

- Built multiple NLP applications using Transformers.
- Solved 450+ programming problems.
- Finalist in University AI Innovation Challenge.
